

Dear Colleagues,

I hope you enjoy a relaxing summer. As you may know we organize the next ESCAPE meeting in Athens, to be held in June 18-21, 2023. The site is currently open (<https://escape33-ath.gr/>) awaiting abstracts and contributions. The deadline for abstracts is **15 September 2022**.

The ESCAPE series, sponsored by the European Federation of Chemical Engineering (EFCE) and the CAPE Working Party, reaches out a **purely international audience** with several non-EU members already contributing to its Executive Board.

The venue is located at the center of the archaeological site in Athens, just across the [Temple of Olympian Zeus](#). This is a ten-minute walk from [Acropolis](#) and its [Acropolis Museum](#), the Old Town, the [Ancient Agora of Classical Athens](#), the [Roman Agora](#) (Roman Forum), [Thiseio](#) and the [Ancient Theater](#) of Herodes Atticus, and a 15-minute walk from the [Monastiraki area](#). The venue is also a walking distance from the [Panathenaic Stadium](#) (the stadium which hosted the first modern Olympic Games), and several [top museums in Athens](#) (such as the [National Archaeological Museum](#), the [National Gallery](#), the Museum of Cycladic Art and Benaki Museum of Greek Culture).

The thematic areas of ESCAPE 33 address global challenges where our PSE community is placed with a strong role to play in the future. Such global challenges depend on **global exchanges** and collaborations to share knowledge, problems, and expertise. To that purpose it takes pleasure for us to reach out to the wider community with a view to build a forum for **an international event**. Thematic areas specifically include

- Modelling and optimization for multi-scale integration
- Control, scheduling, and operability at the process and enterprise-level
- Safe and sustainable products by design
- Green and sustainable processes for the circular economy
- Systems methods in industrial biotechnology and biomedical applications
- Multi-scale energy systems engineering (organized by the EFCE energy section)
- Sustainable supply chains and ecosystems
- Education and knowledge transfer

On the day before the symposium, the venue is scheduled to run **hands-on workshops** to demonstrate the latest developments in modelling and optimization in the context of sustainable engineering and digitalization. The workshops will be delivered by a range of research teams and commercial software houses. During the symposium, the venue is scheduled to host **reception events for international PSE groups** interested to share achievements and/or demonstrate software. That could give an excellent opportunity to promote your institution, as well as initiatives related to sustainable development and data modelling.

On behalf of the Organizing Committee

Prof. Antonis Kokossis, CEng, FIChemE, FRSA, FIET
& Leverhulme Visiting Professor at Imperial College, London
National Technical University of Athens
